

Create a GPO (Group Policy Object) and call it USBGuard

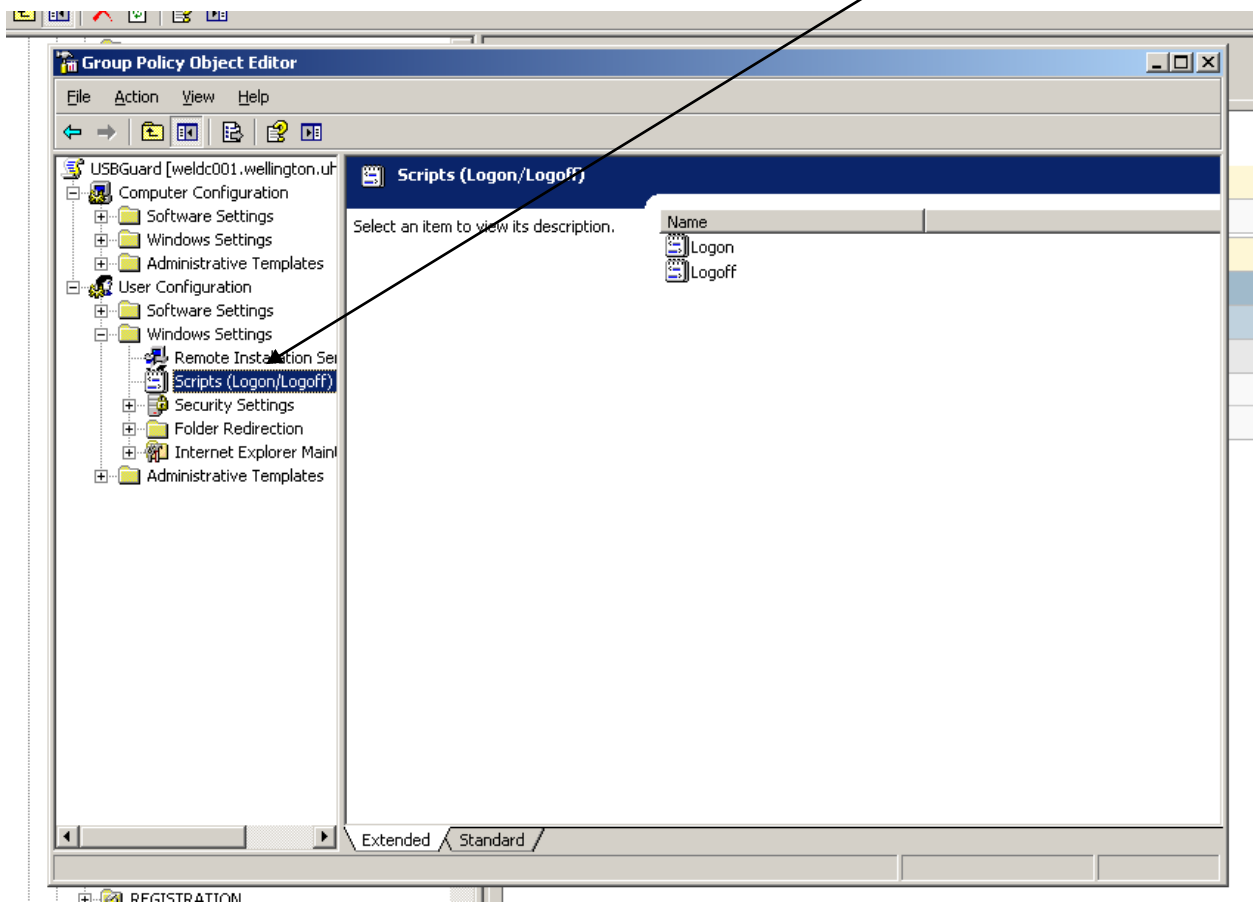

Right click on this Policy and choose edit. This is where you will attach the bat file.

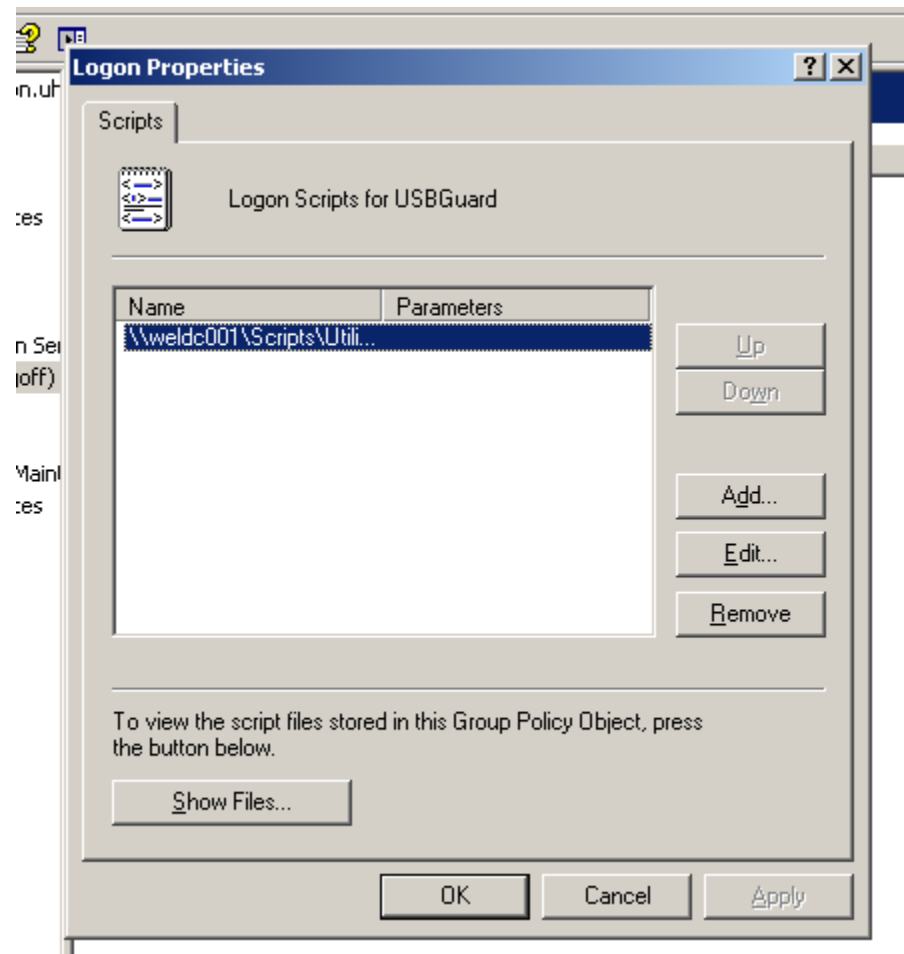

Under user configuration expand the windows settings and choose scripts

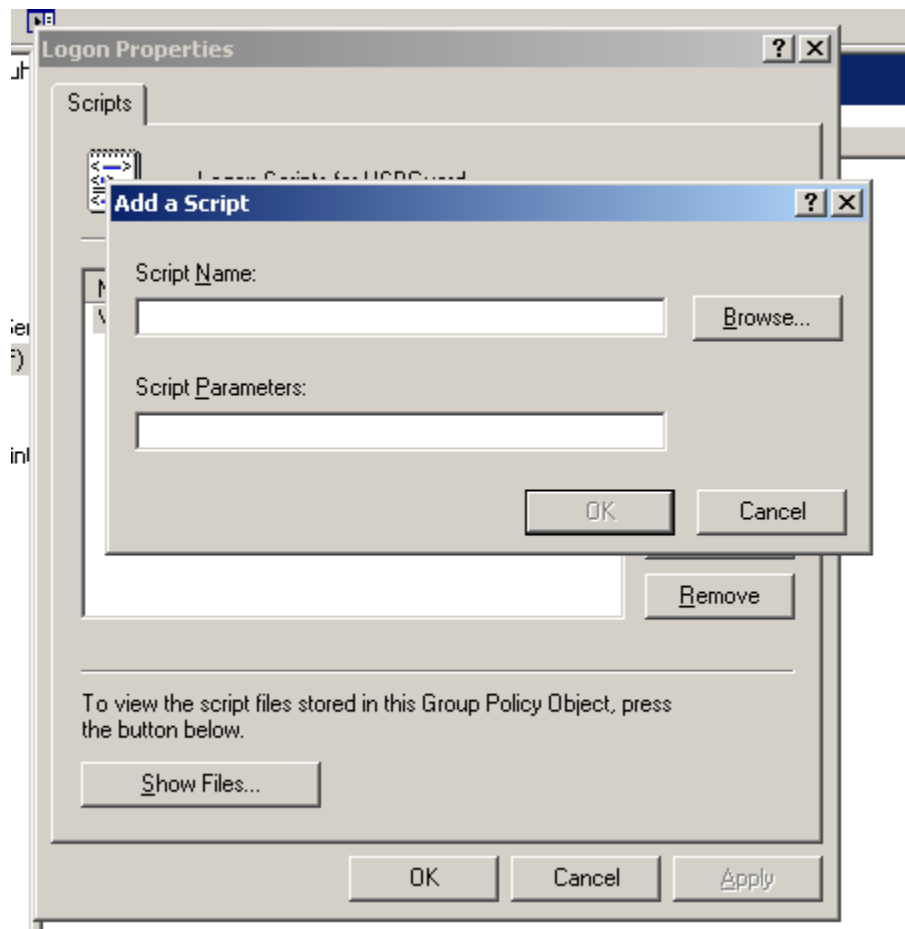

On the left hand side double click the logon you will be attaching the bat file to this...

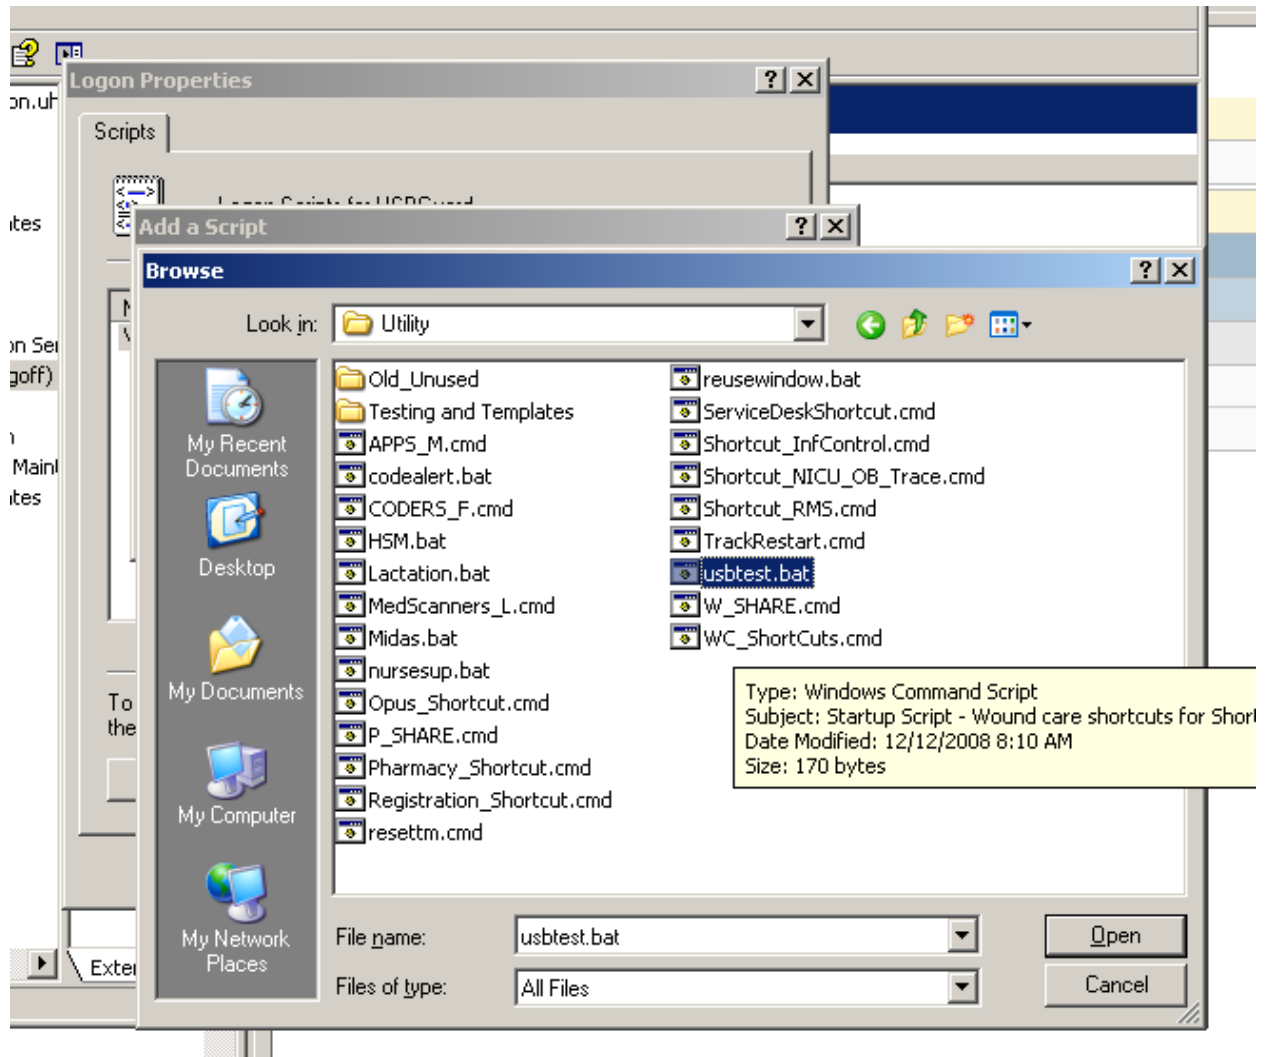

Click on Add...

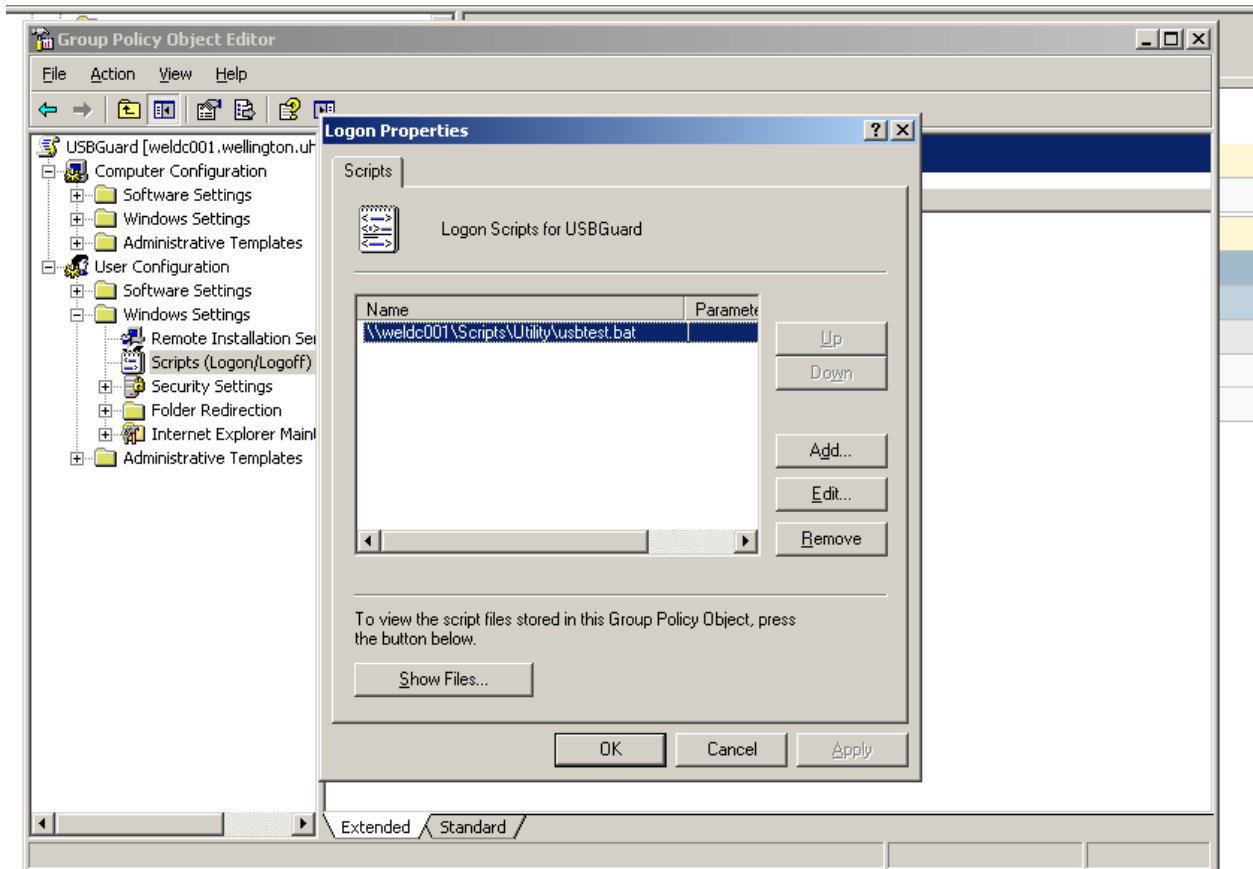

This screen will come up and now choose Browse

Attach the bat file you created from the share you have the bat file stored in on the server then click on open and the file will be attached.

The file is now attached. Click OK and close the Group Policy Object Editor.

Lastly, in the scope add your users or leave the default which will be Authenticated Users.
